Re: Resident Doctors Appreciation Week (February 6- 10, 2023)

---

THANK YOU!

Resident Doctors serve dual roles. In addition to engaging in learning and developing all the necessary skills to become a practicing specialist physician (Royal College or Family Medicine specialist), resident doctors also provide an enormous amount of patient care to the people of Manitoba and surrounding areas.

Resident Doctors are doctors, teachers and learners, in addition to being sisters, brothers, parents and children. Each day Resident Doctors function in many roles and balance an amazing amount of responsibilities.

We appreciate all the contributions that Resident Doctors make to our University and Health Care System on a daily basis. We do not get to express our sincere thanks for all that you do often enough. It is our great honor to be able to actively recognize all the Resident Doctors in all of the Residency Programs at the University of Manitoba during this annual National Week of Appreciation.
